

```
class rectangle{
    int length1,width2;
    void getdata(int x,int y)
    {
        length1=x;
        width2=y;
    }
    int calarea()
    {
        int area=length1*width2;
        return area;
    }
}

class main{
    public Static void main(String args[])
    {
        int a,b;
        rectangle rect1=new rectangle();
        rectangle rect2=new rectangle();
        rect1.length1=15;
        rect1.width2=4;
        a=rect1.length1*rect1.width2;
        System.out.println(a);
        rect2.getdata(2,3);
        b=rect2.calarea();
        System.out.println(b);

    }

}
```
